

LOW COST ICP[®] ACCELEROMETERS

LOW COST ICP® ACCELEROMETERS

IMI Sensors offers a wide range of ICP® accelerometers with an AC voltage output. These accelerometers are ideal for route-based and permanently-mounted predictive maintenance applications. The AC voltage output can interface with third-party data collectors or other online monitoring systems for analysis.

ICP® accelerometers operate on a simple, two-wire system consists of an 18-30 VDC power source, current-regulating diode, voltmeter and decoupling capacitor.

- **18-30 VDC Power Source:** Supply voltage can be provided by line or battery power. Most line-powered signal conditioners supply 24 VDC power as they are connected to an external 24VDC power source. The power provided by a battery-powered signal conditioner can vary depending on the number and voltage of the batteries.
- **Current-Regulating Diode:** ICP® accelerometers require a fixed constant current between 2 and 20 mA so the power must pass through a current-regulating diode. There is an approximate 1V drop across the diode.
- **Voltmeter:** The power is transmitted to the ICP® accelerometer via two-conductor cable with one conductor acting as the ground and the other conductor transmitting both the power to the sensor and the output signal from the sensor. The portion of the voltage used to power the accelerometer’s amplifier is called the bias voltage and is usually in the range of 8-12 VDC. The voltmeter monitors this bias voltage and is useful for checking sensor operation. The output signal is an AC dynamic signal that rides on top of the bias voltage.
- **Decoupling Capacitor:** When the output signal is received at the signal conditioner, the DC bias voltage must be decoupled from the AC signal voltage in order to record accurate data. The 10-30 µF capacitor shifts the signal level to essentially eliminate the sensor bias voltage, providing a drift-free AC mode operation.

LOW-COST VS. PRECISION

IMI Sensors’ ICP® accelerometer product offering can be divided into two categories- low cost and precision. The table below highlights the difference between the two product categories.

Characteristics	Low Cost	Precision
Construction	Embeddable pellet	Shear-mode element
Calibration	Single point	Frequency sweep
Sensitivity Tolerance	Less tight	Tighter
Price	Lower	Higher

OPTIONAL SENSITIVITIES AND FEATURES

Most models listed in this brochure are available with alternate sensitivities and optional features. Alternate sensitivities are 10 mV/g, 50 mV/g and 500 mV/g. Optional features are indicated by a prefixed model number; to select any of the below-listed features, add the appropriate prefix to the core model number. All prefixes can be combined except EXHT and HTTO. When selecting a prefixed model, refer to model-specific outline drawings as some prefixed models' dimensions differ slightly from their unprefix model equivalents.

Optional Feature	Prefix	Description
Hazardous Area Approval	EX	Accelerometer is certified for use in potentially explosive environments via ATEX, CSA and IECEx. Available on 602, 603, 606, 607 and 608 Series.
High Temperature Range	HT	Accelerometer's operating temperature range is increased from +250 °F (+121°C) to +325 °F (+163 °C). Available on 602 Series.
Metric Mount	M	Accelerometer includes an M6x1 mounting stud or bolt instead of a ¼-28 mounting stud or bolt. Available on all series.
Temperature Output	TO	Accelerometer includes a built-in temperature sensor and provides a DC voltage temperature output in addition to the AC voltage vibration output. To transmit the second signal, accelerometer has one additional pin (connector version) or one/two cable conductors (integral cable version). Available on all series.

LOW NOISE ICP[®] ACCELEROMETER

601 Series

ACCELEROMETER WITH MIL CONNECTOR

MODEL 601A01

- Excellent signal-to-noise ratio
- Low noise floor

SPECIFICATIONS	
Performance	
Sensitivity	100 mV/g 10.2 mV/(m/s ²)
Measurement Range	±50 g ±490 m/s ²
